Traffic Reporting

Traffic reporting permits the strict control of telephone calls and detailed billing reports. It structures subscribers in administrative units (companies/departments) and the administrative unit specific data may be accessed, modified or printed. Any authorized user may access and print detailed billing reports in real time.

Advantages:

- Adaptable for any digital telephone exchange
- It prints detailed traffic reports for each user of each administrative unit
- It permits unlimited number of personal access codes (passwords) with optional type configuration
- It permits unlimited tariff tables
- Detailed reports which also have optional type configuration
- Follow up traffic from private telephone networks
- External traffic recording and follow up

Facilities:

Passwords have several characteristics:

- Variable length
- Access class restrictions
- Limited sum
- Monthly sum limit
- Limited validity time access
- Monthly billing reports

Billing options:

- Distinct tariffs for subscribers and selected routes
- RomTelecom impulse based teletaxation tariffs
- Personal codes (passwords) taxation

- Unknown destination alarm, default tariffs
- Different number taxation
- Tariffs by hour/day/ week

Reports options:

- Detailed on stations/groups of stations/access codes
- Synthesis on administrative units
- Synthesis on node (digital telephone exchange)
- On-line intranet reports (available) / Internet (optional)
- Monthly call billings, or on pre-established time period, or on request
- Standard and personalized detailed billing reports
